**Medicine Safety Use** – Medicine can help keep you healthy if taken correctly.

Here are some things you can do to ensure safe medication use:

1. Inform your doctor about all your medical conditions.
2. Make sure you tell your caregivers about all your medicines including over-the-counter, herbs and vitamins.
3. Tell your doctor about any allergies or reactions you have had from medicines.
4. When in the hospital, do not let anyone give you medicines without checking your patient ID wristband first.
5. Ask questions about the medicine your doctor prescribes for you. Take notes to help you remember, or if your pharmacy provides detailed instructions about your medication, keep them during the duration of use.
